EXPLAINER

How the Coloprice index is built

23 markets

one unit: USD per kW of committed IT load per month

SWIPE →

coloprice.com

Sources: Coloprice Colocation Index, 26 Oct 2026 · Coloprice index methodology, 1 Oct 2026

STEP 1 · COLLECT

Every price starts in a published source: CBRE and JLL market research and operator disclosures.

Each market on the index links to the report it comes from.

STEP 2 · NORMALISE

$/kW/mo

USD per kW of committed IT load per month

Metered electricity is excluded, so markets compare like for like. Retail racks (3–5 kW) are tracked separately, as a monthly range.

Step 3 · Cite every market

MARKETS PER SOURCE REPORT · OCTOBER RELEASE

01	CBRE Global Data Center Trends 2026 Singapore to Paris	13
02	CBRE North America Trends H1 2026 US metros, Ashburn to Hillsboro	9
03	CBRE North America Trends H2 2025 North America average	1

23 markets in total. Missing data stays empty: nothing is estimated silently.

Sources: Coloprice Colocation Index, 26 Oct 2026 · Coloprice methodology, 28 Oct 2026

STEP 4 · KEEP THE HISTORY

302

data points in the price history since June 2023

Each refresh appends a point. Unchanged values are not repeated within a week, and past points are never rewritten.

STEP 5 · PUBLISH IT OPENLY

The compiled data is free under CC BY 4.0. Cite Coloprice with a link.

Monthly releases and raw JSON series are public, so anyone can check the numbers.
